

Available in a Range of Variations for every Requirement
A Signal Feedback Line for all Frame Sizes

iTec

9-pin power connector or 15-pin hybrid connector designed for the smallest drives

yTec

15-pin mixed assembly with a 15-pin hybrid solution and additional M12 bus connector

(M12, e.g. 5-pin for additional bus connector)

yTec

Terminal cross-section power 1.5mm² max, signal 0.75mm² max.

iTec

12-pin connector for all signal cables, for drives with a minimum terminal cross-section of 2.5mm²

**If it's a tight
squeeze again...**

The Connection System for Motors with Small Frame Size
Intercontec Innovation for a New Standard

yTEC **iTEC**

intercontec
infinite connections

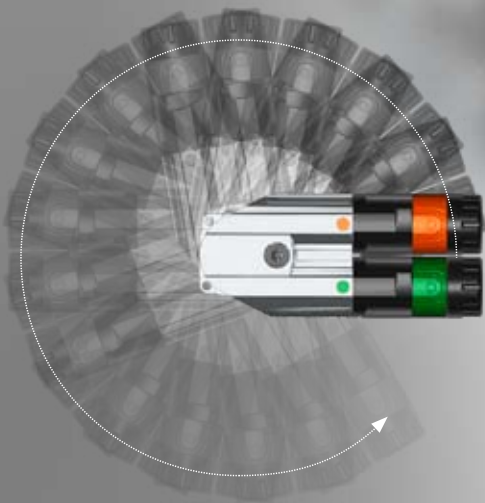

Maximum Accessibility, Minimal Intrusion

Due to a perfect cover partition and enough space for easy assembly, fitting contacts has never been easier! The yTec system requires only one mounting hole and is available in two different flange sizes, 25 and 28.

iTec, the yTec Single Solution

iTec is available in all yTec pin layouts and is compatible with all mating yTec plugs.

Plenty of Flexibility, Little Space Requirement

The yTec system connector can be mounted in 4 different angles (0°, 90°, 180° and 270°). Additionally, after installation, the system is infinitely rotatable by 300°.

Easier isn't Possible.

With yTec and the single version iTec you will receive an ultra compact complete system with an automatically locking quick-release fastener for easy and safe connections.

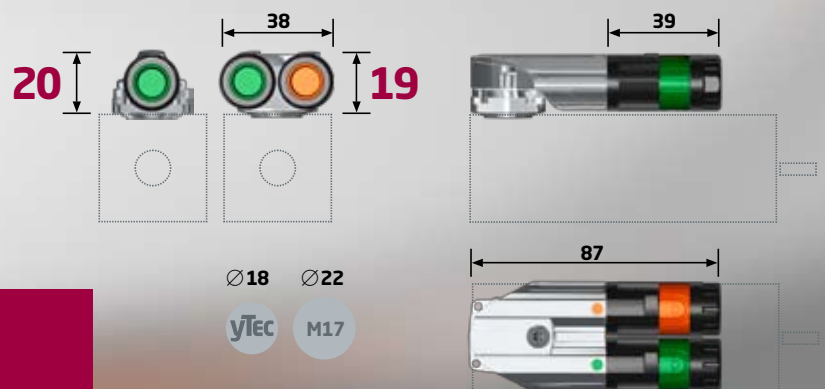

The mechanically coded housing in conjunction with colour coding makes any confusion of signal and power plug impossible.

Automatic locking even in the smallest space

Flat - Narrow - Short

yTec and iTec system connectors define a new connector dimension. Miniaturized size in all three dimensions ensures that the system is compatible even with the smallest of motors.

A complete system miniaturized

Flat, narrow, short

Plenty of assembly space

Easy and quick mounting

Automatically locking quick-release fastener

Clear and safe coded housing

Mountable in 4x90° angles, rotatable by 300°
